Business Arising: Nil
General Business:
1. Thanks to Adrian and Dee for their Home Visit.
2. About 25 for the Home Visit to Arni’s and Murray’s
3. About 30 for the Visit to ESIGRO in January and about 30 to go to the “social” gathering at Alistair’s and Mich’s place on the 27th December.
4. The meeting accepted the changes to our meeting times as suggested by the committee. There will be a review of the December 14th GM (I rang Naomi of the

City and she has tentatively double booked us for Dec – 14th and 7th – so the committee and the members will look at this early in 2010).
5. It was moved by Neville and seconded by Chris J that the sub-committee be congratulated on their negotiations with the Belmont City officials over venue/meeting dates changes.

Cultural Award:
Neville for a superbly grown Dendrobium lindleyi with a ‘hell of a lot’ of flowers.
Raffle:
Name Badge: As usual, the Christmas Raffle provided plants for all Members in attendance (thanks to those Members who donated plants).
Special Raffle:
Home Visit Name Badge:

ABOUT US

Monthly Meetings
Monthly meetings held on the 2nd Tuesday of each month (exc January at Forster Park Hall, cnr of Abernethy Road and Keane Street, Cloverdale commencing 7.45pm.
Monthly meetings commence at 7.45pm. Usually, the short formal meeting is followed by plant descriptions given by members. Supper follows to allow members time to socialise and discuss orchids. All visitors are very welcome Membership Fees
Family (1st year @ 2 badges) $31.00 renewal $15.00
Single (1st year @ 1 badge) $18.00 Renewal $10.00
New members who don’t live in Perth will not require name badges, therefore their membership will be at the renewal fee
Monthly Home Visit
On the weekend following the fourth Thursday of each month (generally on the Sunday morning), a home visit is held at a member’s home. This gives members an opportunity to enjoy the fellowship that our mutual interest provides, and to see how others go about growing their orchids.
Monthly Plant Display
Given that the prime objective of the Society is to promote the cultivation of species orchids, only species or natural hybrids are acceptable for display. Since we all may be uncertain about the identification of a plant from time to time, we encourage members to bring plants along about which they are unsure since someone may be able to identify them. There is no competition nor restriction on flower count, quality or length of ownership. We want members to be able to see species plants in flower. So even if your flowers are a bit past their best, bring them in as others may not have seen that species in flower.
Plant Sales
The Society provides an opportunity table for members to sell surplus plants and equipment, and for the Society to sell product from time to time. A commission of 10% is charged on all sales.
Plant Purchases
The Society endeavours to obtain a different species seedling for sale at each meeting, usually costing between $6.00 and $12.00. The Society makes a small profit on these sales which is invested in benefits to members. As it is always difficult to get new or different species, should members have 20 or more plants of one species which they feel might be suitable as a monthly plant, please contact a Committee member.
Raffle
The Society conducts a raffle each meeting and at home visits as a means of raising funds.
Plant Imports
The Society is able to use quarantine facilities provided by Ken & Chris to co-operatively import species orchids.
Management
In accordance with the Constitution, the Annual General meeting is held in May each year at which time the office-bearers and committee are elected. The majority of Committee members serve two year terms.
Over the past few years, those of us who spend some time on the internet have witnessed an explosion of on-line publishing. This makes a wealth of information available, often written by enthusiasts using language that is familiar to us. I am fortunate that Tony Watkinson who spends time ‘orchid surfing’ often finds gems and sends me the details. In this short article, I will identify just a few of those available, concentrating on those that include articles rather than just photos.

Just last month, Tony sent me the URL for a publication called Orchid News, web published in Brazil. The URL is http://www.delfinadearaujo.com/on/on36/summary.htm. This on line publication is filled with interesting articles for orchid enthusiasts. For example, in the current edition (#36), there are articles on habit (Cattleya dormaniana, Conservation of Orchid Habitats in Indo-Burma, and Cerrado from Minas Gerais carbonita region), an interview on hybridization, and a detailed treatment of the genus Acacallis. What's more, this is free and the previous 35 editions have the same kind of information! The text is well written and referenced.

Another two interesting sites are Flora of Zimbabwe (http://www.zimbabweflora.co) and Flora of Mozambique (http://www.mozambiqueflora.com/). Both have short notes on the species orchids of these countries, and are being expanded all the time with more photos. This material is not generally available unless you purchase specialist books, and as I’ve said before, its free!

The New Zealand Internet Orchid Review is published quarterly and e-mailed to subscribers. Tony has sent me several copies of this comprehensive e-newsletter. All you need to do to subscribe is to send an e-mail to ncmiller@orcon.net.nz.

If you are orchid surfing and happen to find an interesting on-line publication, please let me know and I’ll publish the details so that we can all share in this readily available source of information.

As agreed at the November meeting, the next general meeting will be on Tuesday 9 February 2010. Remember, while we will continue to meet at the same venue, the meeting is on the second Tuesday of each month, not the fourth Thursday!

The CD that Michele and her team have been working on for several months will be distributed at the February general meeting. Michele will also show us how to use this resource. I am sure that like me, you will be amazed at what she has managed to do, and I firmly believe that this will make us the envy of many other orchid societies. Members not in attendance will be sent their copy by post.

Would all Members who have library books out please return them at the February meeting so our annual audit can be completed.

For all Bulbophyllum fanatics, Tony will have the CD of Bulbophyllums: The Incomplete Guide by Bill Thoms at the meeting and will show it to us. Maxine will contact Orchidaceous Books to ascertain whether they can supply it (apparently book is US$45 and the CD US$20 plus postage).

Don’t forget the parking - please ensure that you park your car in the bitumen parking area whenever possible as it will avoid a fine!

FOR SALE/WANTED

Imported plant news
We had approximately 25% of the plants released in 17 December, principally the Paphiopedilum species which handled quarantine very well. I expect that about the same number will be released before the February home visit.
Ken & Chris

BOOK REVIEW—THE PLANT HUNTERS
Carolyn Fry  Andre Deutsch 2009

While in Melbourne recently, Chris and I wandered into a Dymocks bookshop. Normally, it is a bit of a waste of time looking for anything about orchids as all they have are simple publications that most of us already have. However, in this case I was pleasantly surprised to see a copy of The Plant Hunters. This well priced book ($60) was published in 2009, and covers the world’s botanical explorers from ancient Egypt to the present day.

The book includes replicas of early manuscripts and field notes, excellent illustrations, and easily readable text. Throughout the book, Carolyn Fry tells the stories of the plant hunters including some of the well known orchid collectors including Linden, Parish, Roezl and Warszewicz amongst others. She also covers other well-known botanists including Joseph Banks, Francis Masson, Joseph Hooker and Ernest Wilson.

If you have only a passing interest in horticulture, this book is a worthwhile investment as it covers origins of many of the plants that we now take for granted.

ORCHID BENCHING FOR SALE

Tony has passed on the following for inclusion in our newsletter.

Having been keen orchid growers ourselves, I am wondering whether any of your members may be interested in buying a display stand which has been used specifically for cymbidium orchids. It is 3 m wide, 1 metre high and 1 metre deep, with 3 display shelves of equal height. It is of very sturdy iron/metal and is contained in a shadecloth and metal framework (made by Peters Glen) which has overhead reticulation fittings.

I would expect it to be worth about $300 but price is negotiable. My husband is sick and I am no longer able to carry on with the orchids.

I have not yet advertised it in the newspaper, but thought I would ask first if there are any keen orchid growers who may be interested. It can be viewed at 4 Arkana Way, Balcatta (close to Northlands Shopping Centre). My telephone number is 9349 5043.

Thanking you (Mrs) Evelyn Petters

DECEMBER HOME VISIT

Thanks Michele and Alistair for making your home available for a Christmas social event. Many of us thoroughly enjoyed the visit, the chance to socialise with one-anther, and to explore your home, and share in some of your fabulous home-cooked food.
Oncidium onustum occurs in Panama, Colombia, Ecuador and Peru as a miniature, warm to hot growing epiphyte from areas that have a long dry winter and is found at elevations of 25 to 1200 m. These plants come from Tinonee Orchids and have been grown on for us by Sharon.

The racemose inflorescence is curved and generally partially pendant with a few to many, long-lasting, bright yellow, non-fragrant flowers. This variable species flowers in the summer and autumn - some members seem to have very floriferous clones.

Oncidium onustum is said to be one of the easiest orchids to grow provided one understands their native habitat. In its natural habitat, it grows in extremely dry, harsh conditions in direct sunlight, often on sparse brush and cacti. This causes the pseudobulbs to shrink to hard, prune-like structures during the dry season, expanding to store water during the wet season. It is important the ensure that the pseudobulbs dry quickly after watering.

The more light you can give your plants, the darker the mottling will be on the pseudobulbs, and it appears that flowering is more prolific.

This is one species that does require a distinct rest period following flowering, with no fertiliser and little moisture. While they are best on mounts such as sheoak, natural cork, or well aged hardwood, they can also be grown in small terra cotta pots or in plastic pots provide care is taken to keep them dry. I have found the major pests to be mealy bug, and hard and cotton scale. Dealing with the ants and maintaining high air movement will help keep these pests at bay.
