

Servo Reverser

Specifications

Size: 75 x 22 x 8 mm

Weight: 15 grams

Voltage: 4 or 5 Cells, Reverse Polarity Protected

Centre Pulse Width: 1.5 milliseconds

Nominal Input Pulse Range: 0.85 – 2.15 milliseconds

Output Pulse Range: Limited to 0.85 – 2.15 milliseconds for servo protection

Note: Long cable runs to the Servo Reverser should be avoided due to the consequent voltage drop, hence causing erratic behaviour. In these situations, the Servo Reverser should be positioned near the receiver, and then cables run to the servo.
